

Welcome to the GIS Lab in IESA UNG

The GIS Lab is [Dr. Huidae Cho](#)'s research group in [IESA](#). Our research focuses around the broad applications of Geographic Information Systems (GIS) and computational methods to geospatial analysis, modeling, and engineering. We use this wiki site to share project information and document our research for internal collaboration. Most of pages related to ongoing projects will be hidden from the public, but we will disseminate research findings and outcomes once the project is completed. Find the [conferences](#) where you can meet us.

Please also check these [2021 academic opportunities](#).

Current projects

- [Water balance analysis for Seoul](#)
- [Fast flow accumulation](#)
- [Efficient delineation of a large number of subwatersheds](#)

Projects on hold

- [UNG stormwater modeling](#) by [Christopher Pugel](#)
 - Idea proposed by [Huidae Cho](#), but put on hold because of a lack of budget
- [Topographic index enhanced with soil moisture](#)
 - A special topic in GIS for spring 2020
 - Idea proposed by [Huidae Cho](#) and partially implemented by [Tyler Henderson](#)

Past projects

- [Google Summer of Code 2021 Parallelization of existing modules for GRASS GIS](#)
 - Funded by [Google](#)
- [ProjPicker](#): Spatial query of coordinate reference systems
 - Funded by [IESA](#)
- [Efficient longest flow path algorithm](#)
- [GFC canopy assessment](#)
 - Funded by [the Georgia Forestry Commission](#)
 - [Phase 1](#) by [Owen Smith](#) and [Jennifer McCollum](#)
 - [Phase 1.5](#) by [Owen Smith](#)
 - [Phase 2](#) by [Owen Smith](#)
- [Open source canopy classification](#) by [Owen Smith](#)
 - A special topic in GIS for spring 2020
 - Idea proposed and implemented by [Owen Smith](#)

Software

- [GetOSM](#): OpenStreetMap tile downloader
- [ProjPicker](#): Spatial query of coordinate reference systems
- [r.accumulate](#): An efficient flow accumulation addon for [GRASS GIS](#)
- [Coronavirus Disease 2019 \(COVID-19 or 2019-nCoV\) Cases](#)
- [CanoClass](#): An open-source Python module for canopy classification using [scikit-learn](#)
- [CanoPy](#): A Python module for canopy classification using [Feature Analyst](#)
- [Digip](#): A digital image processing Python module
- [The Automated Floodway Optimizer for HEC-RAS \(AFORAS\)](#)
- [Isolated-Speciation-based Particle Swarm Optimization \(ISPSO\)](#)
- [The Web-based Hydrologic Modeling System \(WHydroMod\) v0.1 for Texas](#)
- [Let-It-Rain](#): A Poisson Cluster Stochastic Rainfall Generator
- [GRASS GIS](#) for MS Windows
 - [Latest daily build for advanced users](#)
 - [Latest daily build for beginners](#)

Manuscripts in preparation

- Owen Smith, Huidae Cho. [An Open-Source Canopy Classification System Using Machine-Learning Techniques Within a Python Framework](#). [Environmental Modelling & Software](#). SCIE, 2019 Impact Factor 4.807.
- Huidae Cho, Owen Smith. [Quantifying Decade Canopy Change for the State of Georgia Utilizing NAIP Imagery from 2009–2019](#). [Forestry](#). SCIE, 2019 Impact Factor 2.293 (too low, maybe [a remote sensing journal?](#)).

Manuscripts under review

- Aboalhasan Fathabadi, Huidae Cho, Seyed Morteza Seyedian, Bahram Choubin. [Comparison of Bayesian Model Averaging and GLUE Weighting Methods for Uncertainty Estimation in Hydrologic Modeling](#). [Journal of Hydrology](#). SCIE, 2019 Impact Factor 4.500.

Recent publications

- Huidae Cho, September 2020. [A Recursive Algorithm for Calculating the Longest Flow Path and Its Iterative Implementation](#). [Environmental Modelling & Software](#) 131, 104774.
